## SCG Cement-Thungsong Plant

The biggest cement plant group in Thailand has implemented vibration online system to replace their walk around tool which waste the time for effective vibration analysis.

They realize a good vibration online system will make the ROI less than 1 year.

They start to invest the system on critical machines, then, balance of plant machines and finally, on general machines.

This makes them have less investment in one time, they invest nearly the same amount to AST in every year.

Finally, they can complete installation for all sensors in 5 years.
